Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Note: This is in response to Amendment filed 09/20/2006.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-10, 21, 29-33, 60-71, and 74 are rejected under 35 U.S.C. 102(e) as being anticipated by Nash (U.S. 5,779,721).

Nash discloses in figures 1-3, an elongate flexible tubular body (22,24); a rotatable cutter (32) disposed at the distal end of said tubular body (22,24); an aspiration lumen (at Q2 of fig. 3) extending through said tubular body (22,24); a control or hub (66) disposed on the proximal end of tubular body (22); wherein the cross-sectional area of the aspiration lumen (Q2) is being at least about 35% of the cross-sectional area of the tubular body (24); a sensor (located at 28,74,76) in electrical communication with a an indicator for indicating resistance to rotation of either to rotatable element (42) or rotatable cutter (32) and wherein the motor control circuit (70) is capable of disengaging the motor rotation from the cutter (32) where indicates an overload condition (col. 8, line 20 to col. 9, line 37).

Response to Arguments

2. Applicant's arguments, see remarks, filed 09/20/2006, with respect to the rejection(s) of claim(s) 1-10, 21, 29-33, 60-71, and 74 under 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Nash (U.S. 5,779,721).
